PHP

1. Create an account with Google Cloud Platform. This can be done by visiting <https://cloud.google.com>

2. In Sign-up page step 1 of 2 choose country and agree to EULA.

- On the "Sign-up" page, step 2 of 2, we'll need to enter payment profile details. A charge of ₹1 will be applied to your card, which will then be refunded. You will receive a \$300 credit, valid for one year, to use on Google Cloud services. After the first year, billing will not start automatically—charges will only apply with your consent.

4.

Try Google Cloud Platform for free

Step 2 of 2

Payments profile ⓘ
Choose the payments profile that will be associated with this account or transaction. A payments profile is shared and used across all Google products.

Access to all Cloud Platform Products
Get everything you need to build and run your apps, websites and services, including Firebase and the Google Maps API.

\$300 credit for free
Sign up and get \$300 to spend on Google Cloud Platform over the next 12 months.

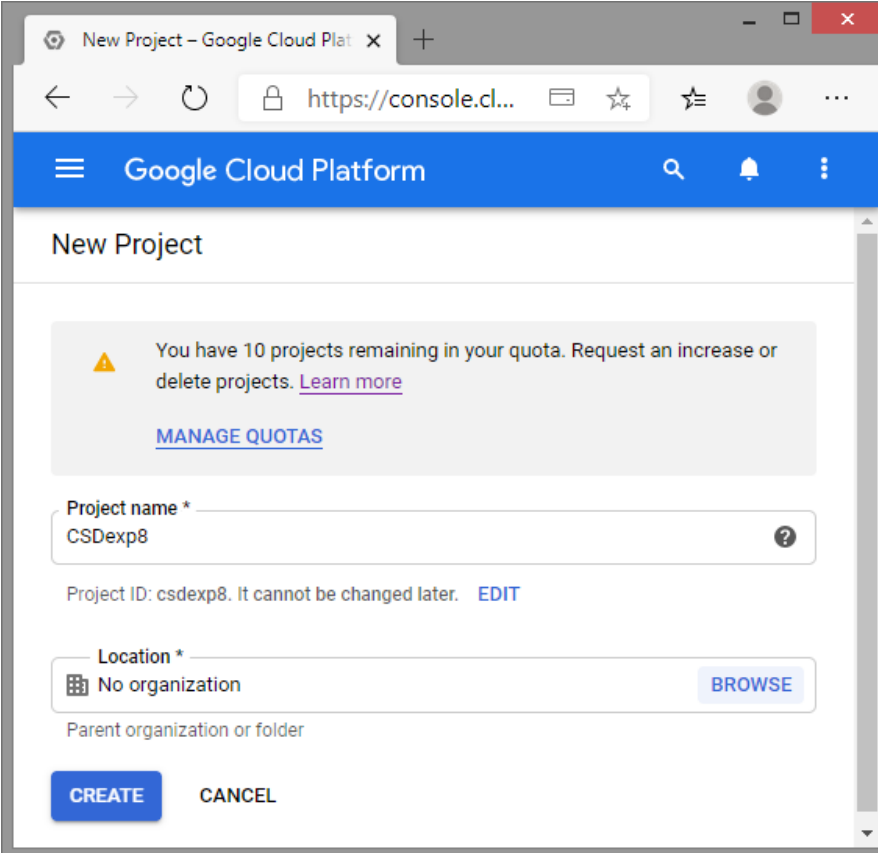

No autocharge after free trial ends
We ask you for your credit card to make sure you are not a robot. You won't be charged unless you manually upgrade to a paid account.

5. Click on *My First Project* and then *NEW PROJECT*.

6. Provide Project name, this part will be unique. Location can be *No organization*.

8. Create a new configuration file *app.yaml*. yaml file contains information about your app's code, such as the runtime and the latest version identifier. Each service in your app has its own app. yaml file, which acts as a descriptor for its deployment.

```
runtime: php55
api_version: 1

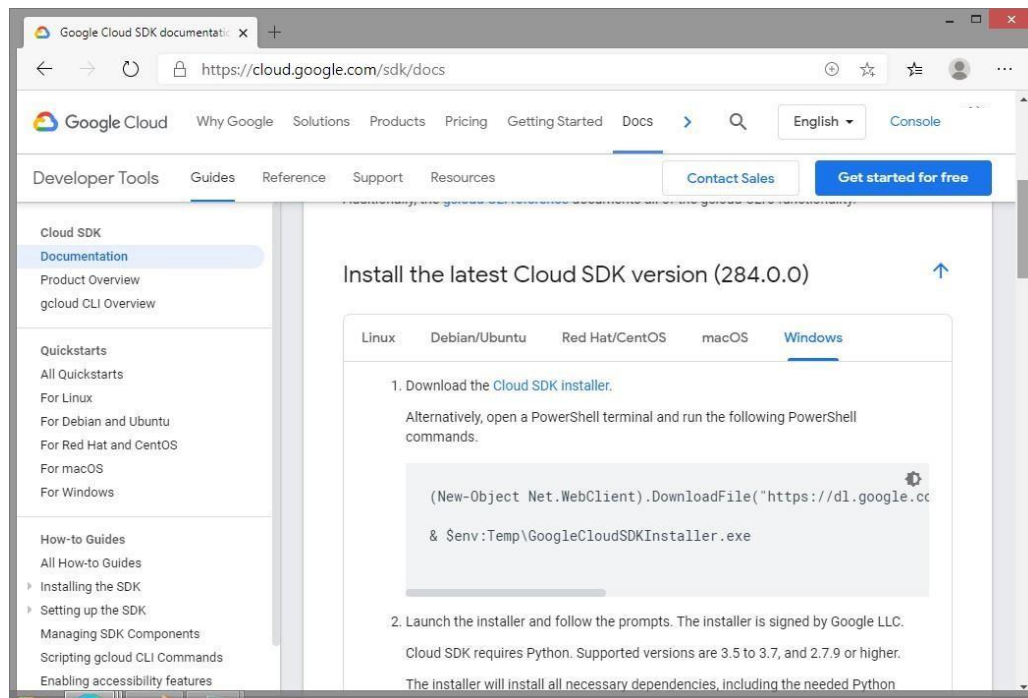

handlers:
- url: /*
  script: helloWorld.php
```

9. Create a PHP code to upload and run.

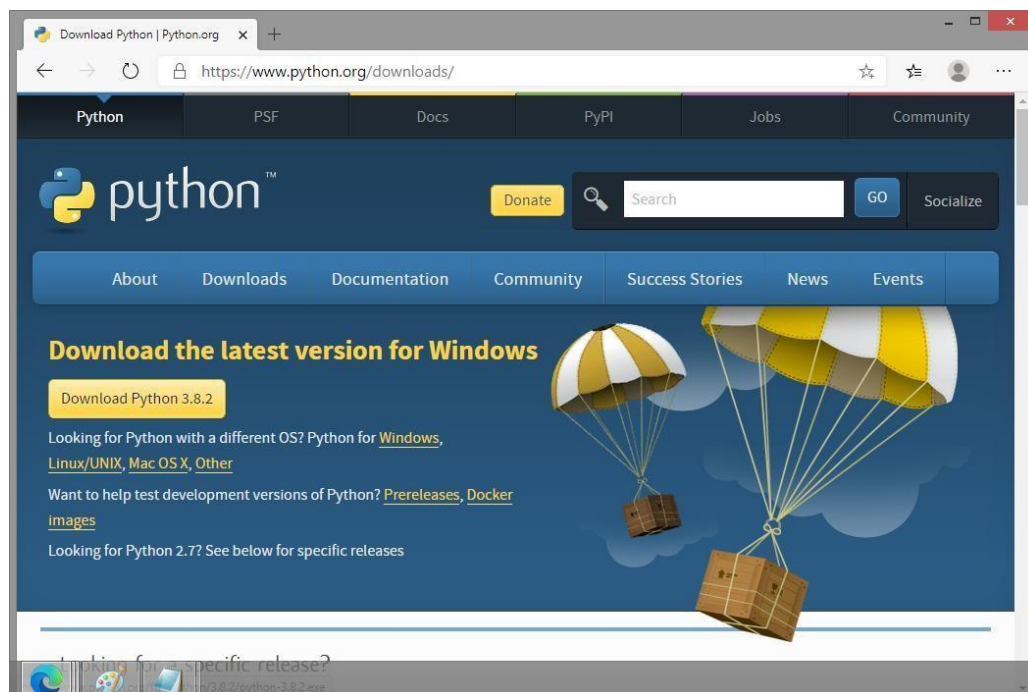

```
<?php
echo "Hi, Kashif.";
?>
```

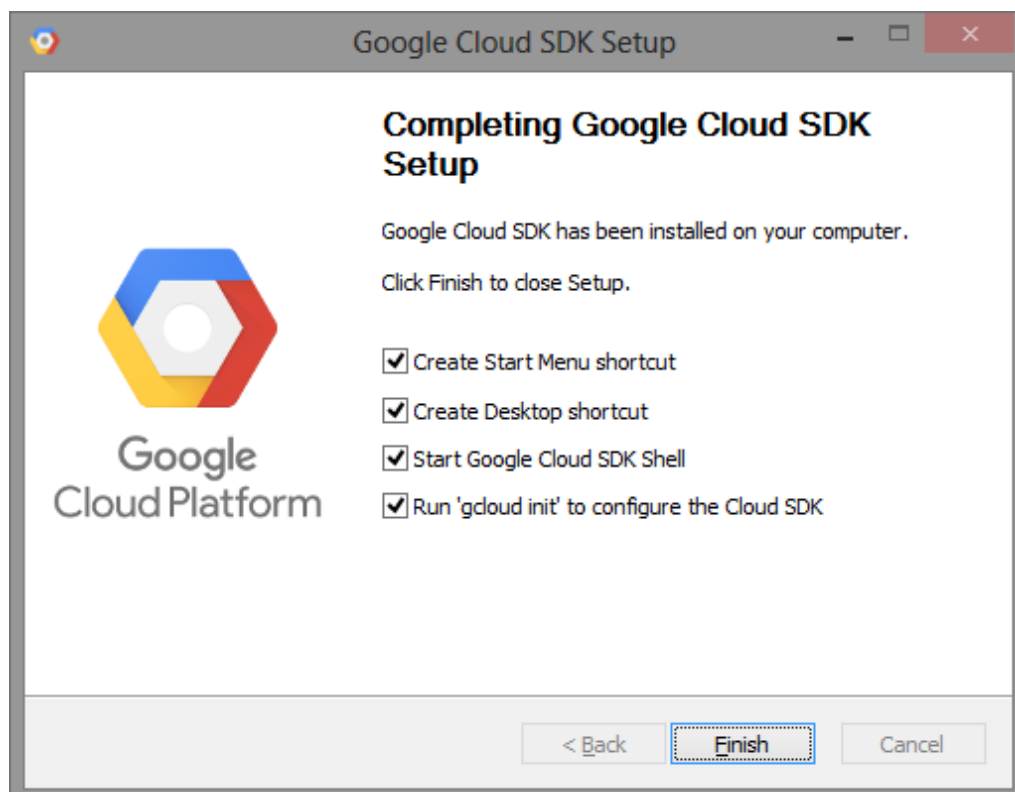

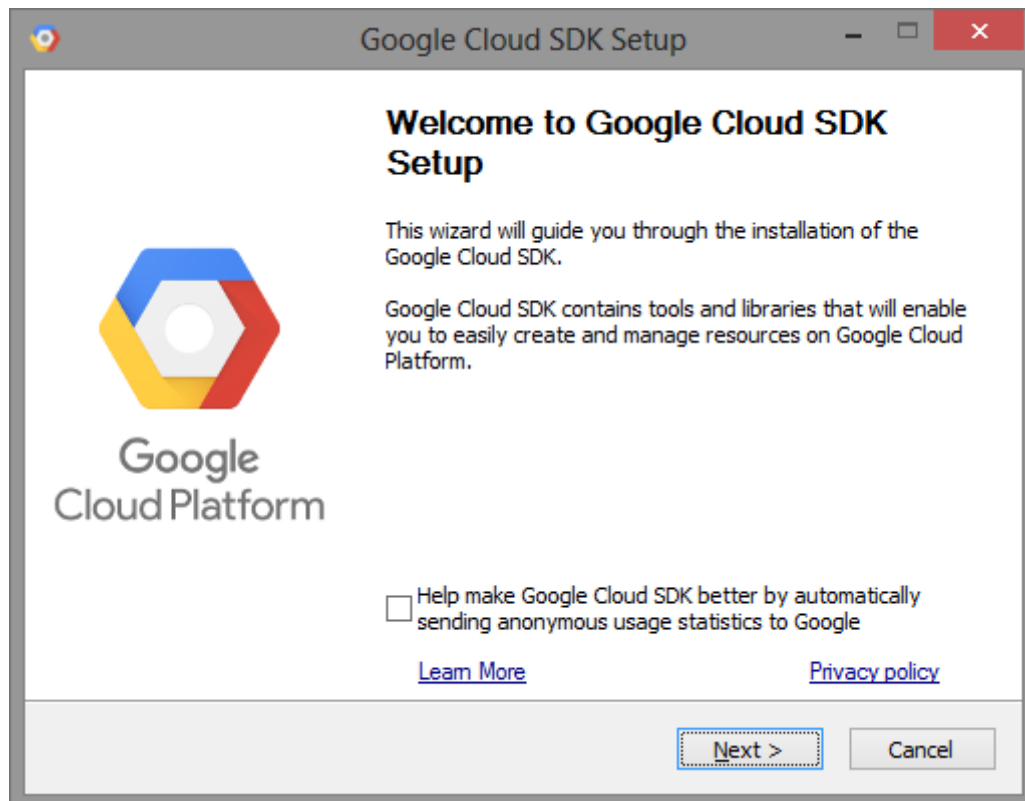

10. In order to deploy and run the PHP code on Google cloud platform, we have to visit <https://cloud.google.com/sdk/docs> to download latest *Google Cloud SDK* and to know how to install it.

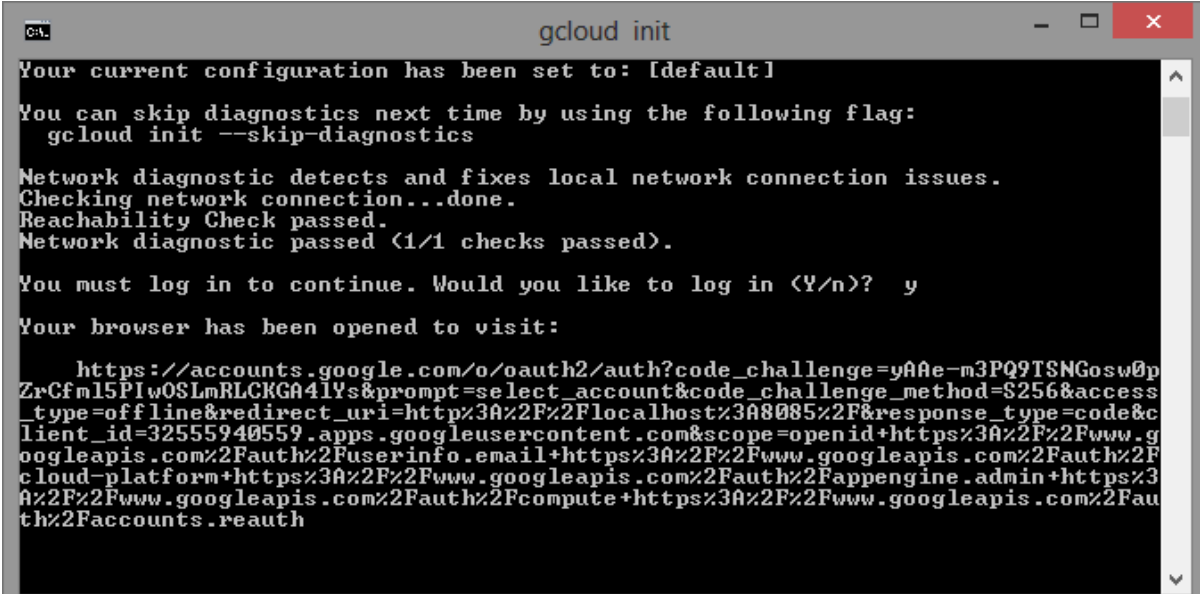

11. This SDK will also require PHP installed on machine, hence download latest PHP from <https://www.python.org/downloads/> and install same.

12. After installation of PHP, open Google cloud SDK installer. It will take some time to download and install SDK from Google Server. At end of installation check *Start Google Cloud SDK Shell* and Run '*gcloud init*' to configure the Cloud SDK.

13. Previous step will open up command prompt with *gcloud init* command running automatically. It will ask you to login using Google account on which you have joined Google Cloud Platform. After successful login web browser page of *cloud.google.com* will show *You are now authenticated with Google Cloud SDK*.

```
gcloud init

Your current configuration has been set to: [default]

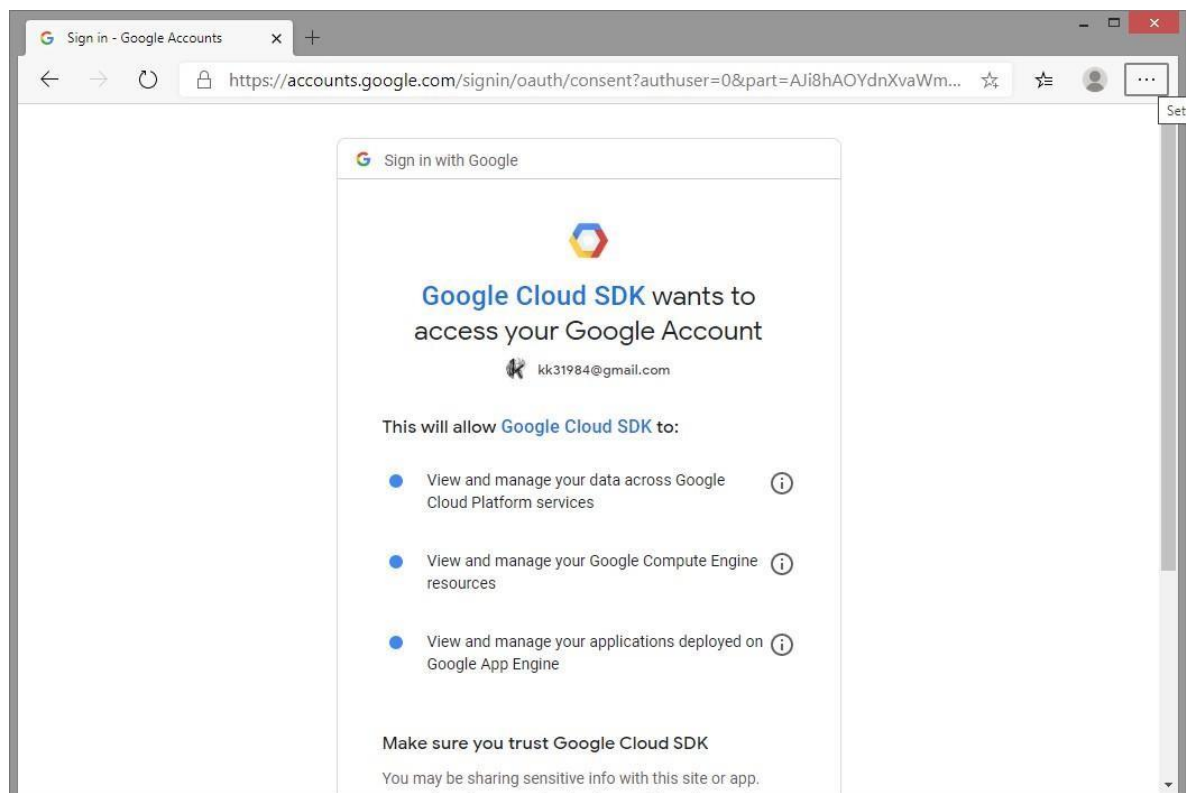

You can skip diagnostics next time by using the following flag:
  gcloud init --skip-diagnostics

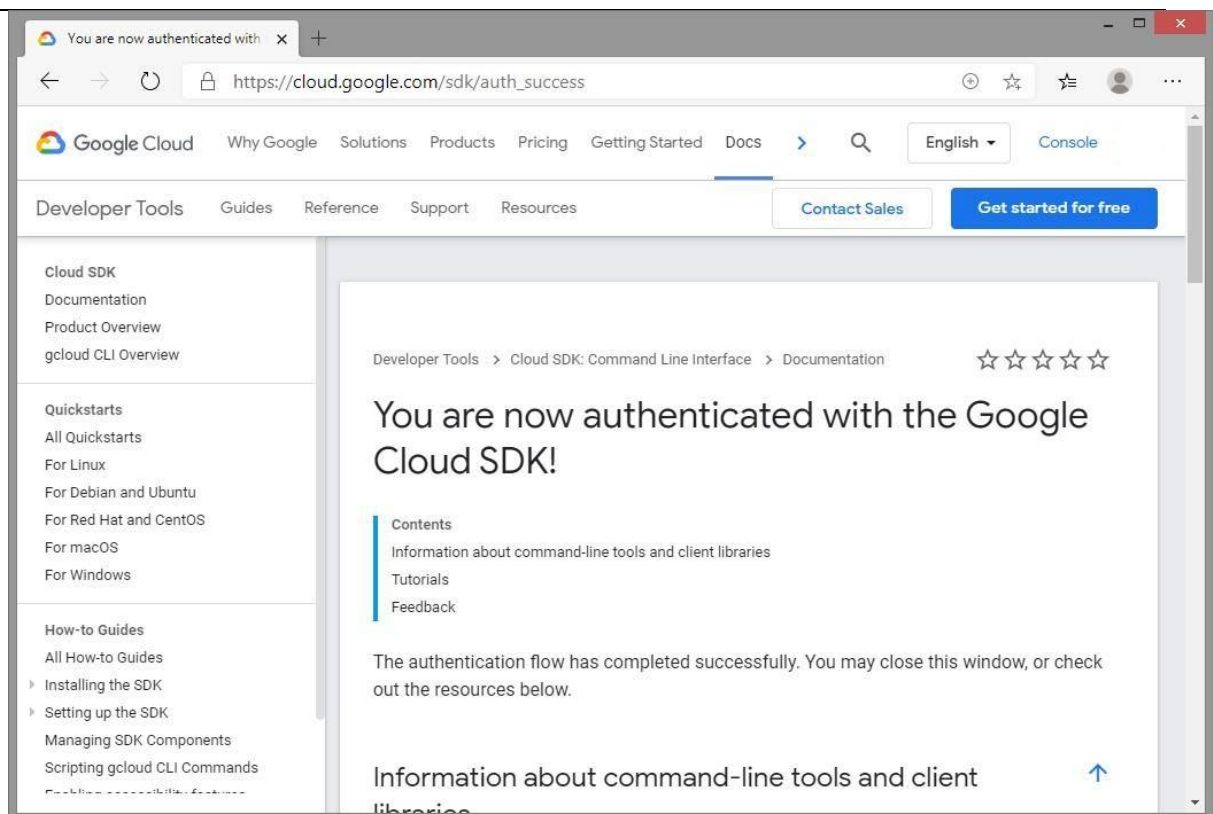

Network diagnostic detects and fixes local network connection issues.
Checking network connection...done.
Reachability Check passed.
Network diagnostic passed (1/1 checks passed).

You must log in to continue. Would you like to log in (Y/n)?  y

Your browser has been opened to visit:

Pick cloud project to use:
[1] basic-garden-271406
[2] csdexp8
[3] indian-force-tra-1522409980627
[4] Create a new project
Please enter numeric choice or text value (must exactly match list
item):
```

15. Change directory to folder where PHP and YAML file is residing.

A screenshot of a Windows Command Prompt window titled "C:\Windows\SYSTEM32\cmd.exe". The window shows the following commands and output:

```
C:\Users\kashif.k\AppData\Local\Google\Cloud SDK>e:
e:\CSD\Exp8 googleApp eng>dir
Volume in drive E has no label.
Volume Serial Number is 8A94-8076

Directory of e:\CSD\Exp8 googleApp eng

03/17/2020  01:08 PM    <DIR>          .
03/17/2020  01:08 PM    <DIR>          ..
03/17/2020  12:36 PM                81 app.yaml
03/17/2020  12:37 PM                30 helloWorld.php
                2 File(s)              111 bytes
                2 Dir(s)  288,729,731,072 bytes free

e:\CSD\Exp8 googleApp eng>
```

16. Type `gcloud app deploy` and select region of Google Data Center where you want to deploy your app, press `5` and press `Enter` for `asia-south1`, i.e. *Mumbai*. Press `Y` to continue with deployment. Result will show URL to launch your GoogleApp. Alternatively you can type `gcloud app browse` to open your App in browser. Further you can make change in PHP code, or add more PHP code and repeat step 15.

```
C:\Windows\SYSTEM32\cmd.exe
e:\CSD\Exp8 googleApp eng>gcloud app deploy
You are creating an app for project [csdexp8].
WARNING: Creating an App Engine application for a project is irreversible and the
